Aim

To design and develop a Insurance Claim Request application in Zoho Creator by creating two Kanban reports and a dashboard using UI Builder. The application organises insurance claim requests based on Claim Type Claim Type and Claim Status , allowing library staff to easily view and manage requests.

Procedure

1. Log in to Zoho Creator and create a new application named Insurance Claim Request .
2. Create the form Insurance_Claim_Request_Form .
3. Add the required fields using the Basic Fields available in Zoho Creator: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.
4. Organize the form into four sections: Policyholder Details , Contact Details, Claim Details , and Assessment & Acknowledgement .
5. Configure field validations such as mandatory fields, email validation, phone validation, number range of 1–5 copies, and restriction of past dates.
6. Submit five sample insurance claim requests to create sample records.
7. Create the first report named Insurance_Claim_Request_Report .
8. Select Kanban as the report format and group the columns by Claim Type .
9. Create the second report named Claim_Status_Request_Report .
10. Select Kanban as the report format and group the columns by Claim Status .
11. Create a custom page using UI Builder and name it Insurance_Claim_Dashboard .
12. Add the two Kanban reports to the dashboard.
13. Arrange and save the dashboard so that library staff can view claims type-wise and status-wise claims type-wise and status-wise .
14. Preview/publish the application and verify that the submitted records are displayed correctly in both reports and the dashboard.

Reports and Dashboard Overview

The application is built on a single form, Insurance_Claim_Request_Form , which stores every insurance claim request along with the requesting member's details. Two Kanban-style reports are created on top of this form so that staff can view the same records grouped in different ways, and both reports are then combined on a single custom page (Insurance_Claim_Dashboard) built with UI Builder for a consolidated, at-a-glance view.

Component	Format / Grouping	Purpose
Insurance_Claim_Request_Report	Kanban, grouped by Claim Type Claim Type	Lets staff see how many requests fall under each Claim Type (e.g. Mechanical

		Engineering, Computer Science & Engineering, Information Technology, Artificial Intelligence).
Member_Type_Request_Report	Kanban, grouped by Claim Status	Lets staff see requests organised by who raised them — Submitted, Under Review, Approved, or Rejected — as separate columns of cards.
Insurance_Claim_Dashboard	UI Builder custom page	Brings both Kanban reports together with supporting charts and summary widgets (claims under review, claims rejected, claim amount, claim type claims under review, claims rejected, claim amount, claim type) on one page.

Explanation of Screenshots

The following screenshots show the Insurance_Claim_Dashboard as rendered in Zoho Creator after the sample insurance claim requests were submitted, along with the Kanban report grouped by Claim Status.

1. Dashboard — Number of Copies Requested

The top section of the Insurance_Claim_Dashboard shows the Number of Copies requested across submissions. The first widget is a bar chart plotting how many requests asked for 2, 3, or 5 copies, and the second is a line/trend widget plotting the Number of Copies against the Purpose of Borrowing (college purpose, college purposes, higher studies, research purposes, and school purposes), letting staff quickly spot which purpose is associated with the largest book quantities.

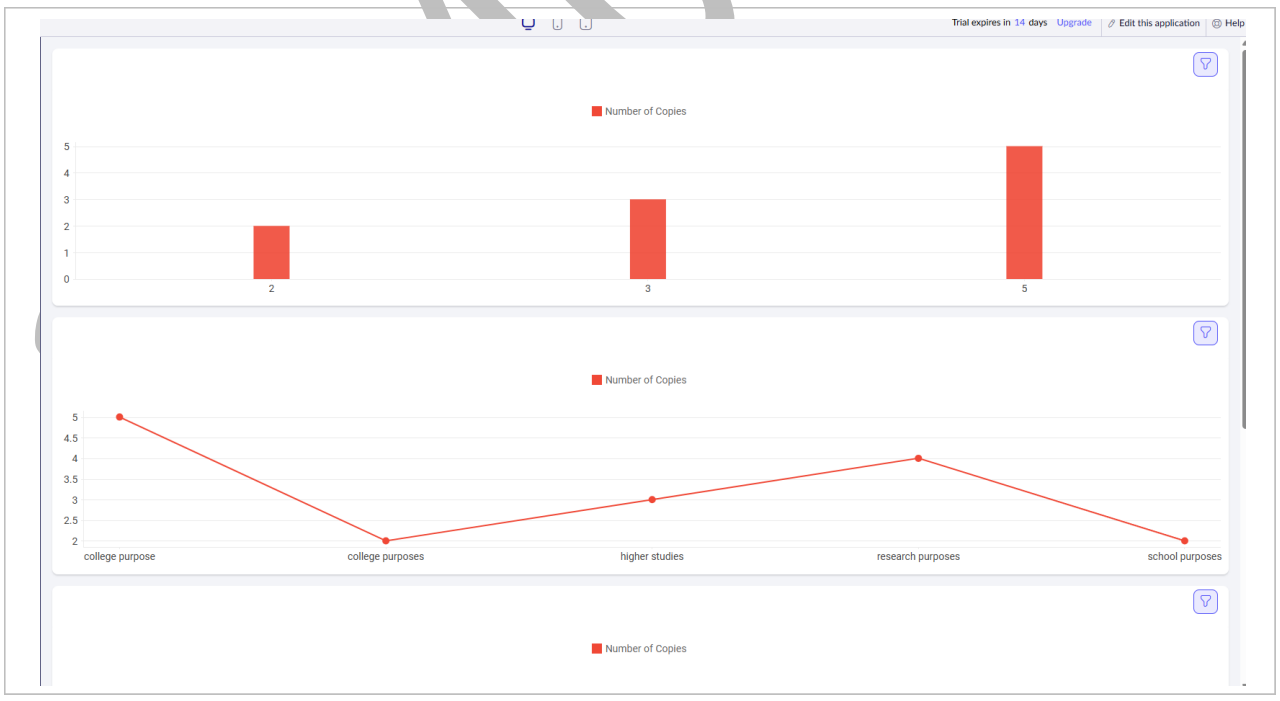

Fig. 1 — Dashboard: Number of Copies by request and by purpose of borrowing

2. Dashboard — Category-wise and Timeline Widgets

Scrolling further down the dashboard shows the Claim Type trend continuing at the top, followed by a radar chart that plots the Claim Amount against each Claim Type — Motor, Health, Property, and Travel — and a semi-donut widget that breaks down requests by their Claim Date.

Fig. 2 — Dashboard: category-wise radar chart and claim-date distribution

3. Dashboard — Distribution Charts, Status Cards, and Member Records

The lower part of the dashboard shows a donut chart comparing the two purpose values (college purpose vs. college purposes), a bar-style summary of requests by Claim Type, and two pie charts — one splitting requests by Claim Amount (2 / 3 / 5) and one splitting requests by Member Type (Student / Faculty / Staff). Alongside these, an Order Status panel lists the count of pending requests per Claim Type, and two status cards report the number of Approvals pending (25) and Requests declined (10). The All Library Management table beneath the charts lists each member's Name, roll number, Member type, Email, and Contact number, confirming that the underlying Member Profile data feeding the dashboard is captured correctly.

4. Kanban Report — Grouped by Member Type

The Insurance_Claim_Request_Report , when switched to Kanban view and grouped by Member Type, arranges the submitted requests into columns headed Submitted, Under Review, Approved, Rejected, and Others . Each card shows the policyholder's name and policy number , for example "Rahul Kumar ? POL241401 " under Student and "Anita Sharma ? POL241402 " under Faculty, giving staff an immediate, drag-and-drop friendly view of who has requests in progress under each member type.

Output

The Insurance Claim Request application was successfully created in Zoho Creator with:

- Insurance_Claim_Request_Form containing all 13 Basic Field types.
- Insurance_Claim_Request_Report in Kanban format, grouped by Claim Type .
- Claim_Status_Request_Report in Kanban format, grouped by Claim Status .
- Insurance_Claim_Dashboard created using UI Builder, containing both Kanban reports.
- Five sample insurance claim request records displayed successfully.

The application provides a structured and user-friendly way for insurance staff to view, categorize, filter, and manage book issue requests.
